

MCH

MCKAY CONANT HOOVER INC
Acoustics and Media Systems Consultants

The Carpenters International Training Center is a 345,000sf monument to the Brotherhood's commitment to lifelong learning. With 60,000sf of shop space, more than 40 classrooms, and nearly 300 dorm rooms in the complex, the Center serves as a hub in a system that can rapidly get in-demand skills into the field. From the 12-acre campus, new craft-skill training is developed for UBC members in areas such as interior systems, scaffolding, commercial door and hardware, concrete formwork and gas-and steam-turbine installation and maintenance.

Since opening this \$30M project in 2008, virtually thousands of union training instructors, staff, and rank-and-file members have taken classes here. MCH provided select acoustical reviews but principally provided full-service audiovisual systems planning and design through construction completion and well beyond as additional AV needs unfolded. Included are 10 divisible classrooms with stage and ballroom functions, PreFunction Spaces, several Dining Rooms, 2 Banquet Rooms, a Bar and both public and back-of-house support spaces. Both speech intelligibility and music requirements are met beautifully.

Randal Willis, P.E., CTS directed and design all of MCH's contributions.
