

This 600 seat presentation auditorium in the basement of the new Human Resources Administration building is divisible into 150 and 400 seat venues for concurrent use, using a custom STC60 partition. Computer modelling was used to carefully adjust wall and ceiling panel angles to ensure a high degree of speech intelligibility in the absence of voice amplification. MCH is providing acoustical consulting services with Gehry Partners on these spaces as well as the entire office building. Scheduled to open in 2010.
